

Editing credentials after changing password

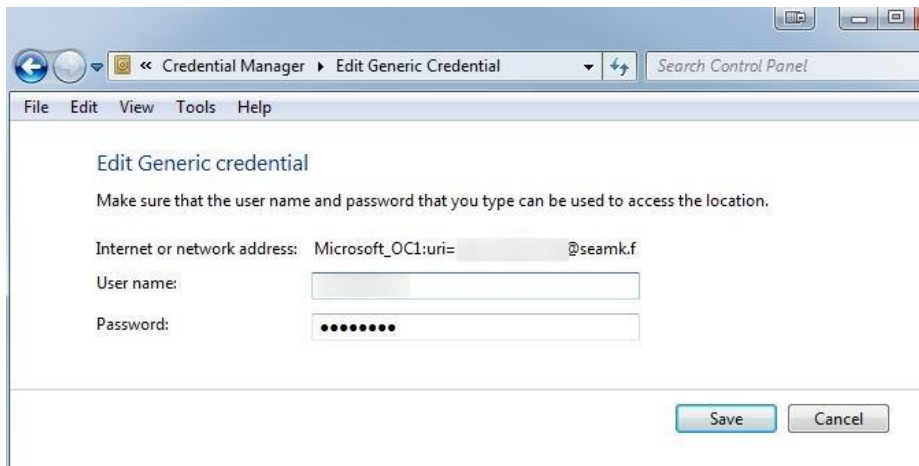

Open **Start menu** → **Control Panel** → **Credentials manager**

Here you can find all of the credentials stored in your computer. If you have changed your epedu password, it is recommended that you remove or edit all of the credentials related to Office and Microsoft. Click on the arrow and choose **Remove from vault**.

You can also edit your credentials, choose **Edit** and write your new password.

When you open a program after removing its credentials, you are prompted to enter your username and password. With Skype for Business (formerly Lync) use your email address, with other programs use the same username and password you use when logging into your computer.

Skype for Business: username is your email address

Outlook: If you are using SeAMK or Sedu network, the username and password are the same as when logging into your computer. If Outlook has already filled in your email address as username, choose **Use another account** and fill in your username and password.

If you are using Outlook in another network, add epedu\ prefix to your username, for example **epedu\k1234567** and your password.
